MOLECULE TYPE: peptide
HYPOTHETICAL: YES
FRAGMENT TYPE: N-terminal
ORIGITAL SOURCE:
ORGANISM: HOMO SAPIENS
IMMEDIATE SOURCE:
CLONE: E3Q 8(1-28) peptide of amyloid B protein
SEQUENCE DESCRIPTION: SEQ ID NO: 4:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ORGANISM: HOMO SAPIENS

EBOGHER CHARACTERISTICS:

EBOGHER 28 amino acids

TYPE: amino acid

TOPOLOGY: linear

MOLECULE TYPE: peptide

HYPOTHETICAL: YES

FRAGMENT TYPE: N-terminal

Patent No. 5840838
GENERAL INFORMATION:
APPLICANT: HENSLEY, Kenneth
APPLICANT: CARNEY, Wichael
APPLICANT: ARSENOW, Michael
TITLE OF INVENTION: A PROCESS FOR ENHANCING THE ACTIVITY OF
TITLE OF INVENTION: AN OLIGOPEPTIDE OR POLYPEPTIDES
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

Patent No. 676188

GENERAL INFORMATION:

APPLICANT: Schenk, Daie B.

APPLICANT: Schenk, Daie B.

APPLICANT: Yednock, Ted

TITLE OF INVENTION: Prevention and Treatment of Amyloidogenic Disease
FILE REFERENCE: 15270J-004760US

CURRENT APPLICATION NUMBER: US/09/580,018

CURRENT FILING DAIE: 2000-05-26

PRIOR PILING DAIE: 1999-05-28
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   OTHER INFORMATION: Description of Artificial Sequence:10-mer peptide; OTHER INFORMATION: from AN1792 sequence (human Abeta42, beta-amyloid; OTHER INFORMATION: peptide)

TITLE OF INVENTION: Human DNA Ligase IV
FILE REFERENCE: PI142P1D1

CURRENT PAPLICATION NUMBER: US/10/141,132

CURRENT FILING DATE: 2002-05-09

PRIOR APPLICATION NUMBER: OS/461,562

PRIOR APPLICATION NUMBER: PCT/US94/12922

PRIOR PILING DATE: 1995-06-05

PRIOR PILING DATE: 1995-06-05

NUMBER OF SEQ ID NOS: 9

SOFTWARE: PAPENTIN VERSION 3.1

SEQ ID NO 2

LENGTH: 911

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 1207. Application US/09764877
Patent No. US20020147140A1
GENERAL INFORMATION:
APPLICAMT: ROSen et al.
TITLE OF INVENTION: Nucleic Acids, Proteins, and Antibodies
FILE REFERENCE: PCOO5
CURRENT APPLICATION NUMBER: US/09/764,877
CURRENT FILING DATE: 2001-01-17
Prior application data removed - refer to PALM or file wrapper NUMBER OF SEQ ID NOS: 4031
SOFTWARE: Patentin Ver. 2.0
SEQ ID NO 1207
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      86.2%; Score 25; DB 16; Length 41; 100.0%; Pred. Sequence 206603, Application US/10424599

PUBLICANT NO. US20040031072A1

GENERAL INFORMATION:

APPLICANT: La Rosa Thomas J

APPLICANT: Zhou Yihua

APPLICANT: Cao Yongwai

TITLE OF INVENTION: Soy Nucleic Acid Molecules and Other Molecules Associated With

TITLE OF INVENTION: Blants and Uses Thereof for Plant Improvement

TITLE OF INVENTION Soy Nucleic Acid Molecules and Other Molecules Associated With

TITLE OF INVENTION: Blants and Uses Thereof for Plant Improvement

TITLE SEPERNCE: 38-21(53223)B

CURRENT APPLICATION NUMBER: US/10/424,599

CURRENT FILING DATE: 2003-04-28

SEQ ID NO 206603

LENGTH: 76
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 256442
